

Helper Guide for Microsoft Projects

Summary: Helper Guide for Microsoft Projects.

Version: 1.00

Contents

I	Introduction	2
II	Registration	3
II.1	Connecting to the Virtual Machine	4
III	Evaluation	5
III.1	Locking the Virtual Machines	5
III.2	Deploying VMs for Evaluation	6

Chapter I

Introduction

This guide will assist you in carrying out Microsoft projects by leveraging a feature that enables you to deploy virtual machines within the exclusive network of 42. To access these machines, you will need to use Remmina, an RDP client available on the dumps. This guide is divided into two main sections:

- The first section, "Project Registration," will walk you through the steps to deploy your projects.
- The second section, "Project Evaluation," will provide guidance on the tasks you need to complete in order to participate in an evaluation.

If you have any problems, please contact the staff on your campus, who will be able to help you.

Chapter II

Registration

If you are planning to embark on a Microsoft project, it is essential to meticulously follow the various steps involved. Microsoft projects have a maximum duration of one month, and the deployment phase is contingent upon the resources available at your campus. To initiate your project, you should begin by registering in the project. In the case of a group project, you need to lock the team to create the requested VMs for your project.

After registering, you will receive an email after up to 5 minutes after subscription of you or your team, indicating that your ressource are available.

An email informing you of the creation of the VMs, their accessibility and their ready status with the subject "Deployment Started" will be sent to you or to the leader of your team.

Once the deployment is finished, you will receive an email after up to 5 minutes after the deployment of your VMs, indicating that the deployment has ended, and that your VMs are now accessibles.

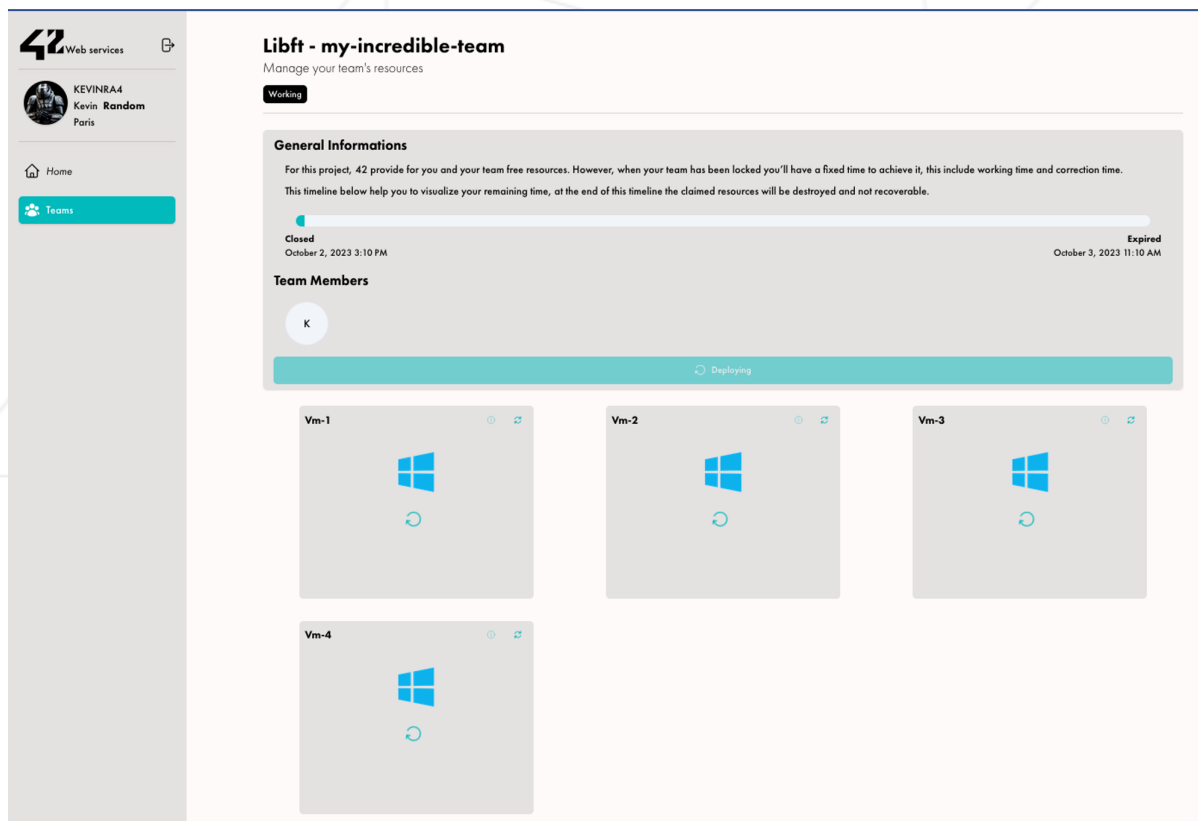

Should you encounter any issues during this process, contact a staff member for assistance.

II.1 Connecting to the Virtual Machine

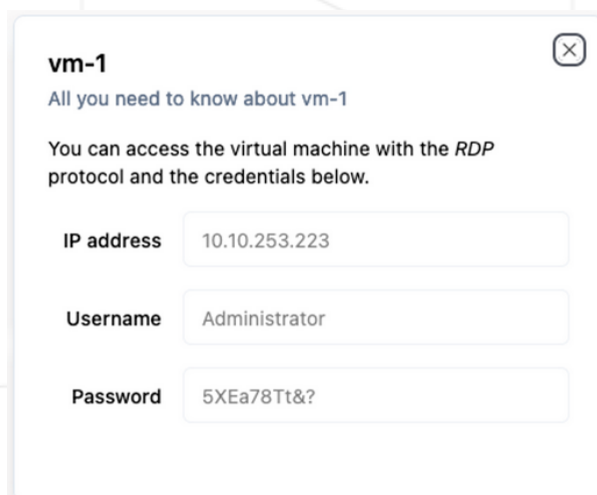

Once your virtual machine is deployed, you will need to use Remmina as your RDP client to connect. You will need information about those VMs, foundable on your page for the VM you're trying to access.

The main interface of the VMProvider website should look like this :

On this interface, you should be able to reload your VMs to default state, and obtain information to connect to said VMs, via buttons for each VMs.

Information to connect to said VMs are accessible via clicking on the (i) icons over each VMs, and should contain the following informations :

Chapter III

Evaluation

This section explains the procedures you must follow to have your project evaluated.

III.1 Locking the Virtual Machines

Once your project work is complete, you will need to lock your virtual machine to indicate that you're ready for evaluation. This is done by setting your project as finished, in the Intra, as you normally do with any other subject.

After locking your VMs, you will receive an email with the subject "Ready for evaluations".

Failure to lock your VM may result in an incomplete evaluation.
Contact campus staff if you encounter issues during this process.

III.2 Deploying VMs for Evaluation

During the evaluation, you'll need to deploy your locked virtual machines again to allow evaluators to review your work.

To deploy it, you must click on the launch evaluation button, foundable here :

Waiting for Evaluations

General Informations

For this project, 42 provide for you and your team free resources. However, when your team has been locked you'll have a fixed time to achieve it, this include working time and correction time.

This timeline below help you to visualize your remaining time, at the end of this timeline the claimed resources will be destroyed and not recoverable.

Vm-2

Vm-3

Vm-4

After the evaluation process is over and resources are cleared, you will receive an email with the subject "Resources deleted".

You will not be able to modify your VM once the evaluation process begins. Ensure all necessary work is completed prior to locking your VM.
